

LegalEase

Run Locally

Detailed Project Topic Document

Purpose: Set up the complete LegalEase application in VS Code and verify that frontend, backend and AI configuration are available locally.

The project documentation requires Python 3.10+, a virtual environment, FastAPI/Uvicorn, Streamlit, the Gemini SDK, document libraries and python-dotenv. ■filecite■turn0file0■L142-L154■

1. Open the project

```
cd LegalEase
code .
```

2. Create and activate a virtual environment

```
# Windows PowerShell
py -3.11 -m venv .env
.venv\Scripts\Activate.ps1

# macOS/Linux
python3.11 -m venv .env
source .venv/bin/activate
```

3. Install dependencies

```
python -m pip install --upgrade pip
pip install -r requirements.txt
```

4. Configure environment variables

```
# .env
GEMINI_API_KEY=your_gemini_api_key
GEMINI_MODEL=gemini-3.8-flash
BACKEND_URL=http://127.0.0.1:8000
```

5. Start FastAPI

```
uvicorn backend.main:app --reload --host 127.0.0.1 --port 8000
```

6. Start Streamlit in a second terminal

```
streamlit run frontend/app.py
```

7. Verify

- Backend health: <http://127.0.0.1:8000/health>
- Interactive API docs: <http://127.0.0.1:8000/docs>
- Streamlit UI: <http://localhost:8501>

The deployment section of the source documentation explicitly describes starting Uvicorn, starting Streamlit, and testing generation, preview, editing and downloads. ■filecite■turn0file0■L267-L293■

Source basis: This topic is derived from the supplied LegalEase project documentation. Where the source did not provide implementation detail, this document presents the corresponding implementation structure used in the completed project.
