

LegalEase

Functional Testing

Detailed Project Topic Document

Purpose: Verify each important user journey rather than only checking that the application starts.

The documentation calls for testing different input combinations and checking generated documents, dark-mode preview, editing, TXT/DOCX/PDF downloads, logos, footers, bullets and terms.

filecite turn0file0L278-L293

Test matrix

Test	Input / Action	Expected result
Health	GET /health	200 + status ok
Validation	Missing parties	422 validation response
Generation	Valid NDA request	Generated content returned
Edit	Change generated text	Edited text becomes export source
TXT	Export valid content	Readable UTF-8 .txt
DOCX	Export valid content	Opens in Word
PDF	Export valid content	Valid PDF opens
Branding	Upload logo	Logo appears where supported
Terms	Multiple semicolon terms	Terms are preserved and tabulated

Automated tests

```
# Run from project root
pytest -q

# Expected coverage areas:
# - / and /health
# - /generate validation and mocked generation
# - TXT output
# - DOCX output signature
# - PDF output signature
```

Manual functional test

- Create an NDA using two parties and three terms.
- Generate and inspect the document.
- Edit one clause.
- Prepare each export.
- Open the TXT, DOCX and PDF files.
- Confirm the edited wording is present.
- Repeat with an employment contract and lease agreement.

Source basis: This topic is derived from the supplied LegalEase project documentation. Where the source did not provide implementation detail, this document presents the corresponding implementation structure used in the completed project.
