

LegalEase

Pre-requisites

Detailed Project Topic Document

Purpose: Record the software knowledge and environment needed before implementing LegalEase.

The source project lists FastAPI knowledge, Google Gemini API familiarity, Streamlit, Python proficiency and environment setup as prerequisites. ■filecite■turn0file0■L27-L33■

Required knowledge

- Python: variables, functions, classes, virtual environments and package installation.
- FastAPI: routes, Pydantic models, dependency injection and HTTP responses.
- Streamlit: widgets, session state, forms and download buttons.
- Generative AI APIs: API keys, prompts, model calls and response handling.
- Document generation: basic DOCX/PDF concepts.
- JSON/HTTP: request bodies, status codes and error handling.
- Git/VS Code: project navigation, terminal commands and environment files.

Software prerequisites

Component	Recommended
Python	3.11+
VS Code	Current stable release
FastAPI	requirements.txt
Streamlit	requirements.txt
Google GenAI SDK	requirements.txt
python-docx	requirements.txt
ReportLab	requirements.txt
Pillow	requirements.txt
Git	Optional but recommended

Initial setup command

```
python -m venv .venv
# activate it
pip install -r requirements.txt
```

Source basis: This topic is derived from the supplied LegalEase project documentation. Where the source did not provide implementation detail, this document presents the corresponding implementation structure used in the completed project.
